

The Donnington 2 Post Parking Lift Let there be space. [Space in our time]

The Donnington the ideal parking lift, with its small footprint provides the extra parking space you need. Strongman have designed this lift with every conceivable convenience which will enable users to not only maximise their car storing options, but also be able to utilise much of the floor space whilst a vehicle is stored on the platform.

Strongman has made sure The Donnington advanced design is robust and sturdy, without taking up too much space with heavy over engineered construction e.g. the platform itself is a mere 70mm thick, so structures with low rooves are not an issue, all the head-room can be given over to the vehicles.

Strongman designed The Donnington from the outset with simplicity of use and

simplicity of maintenance foremost. There are a range of options that make the lifts suitable for all different working environments; The Donnington can have a galvanised finish making it suitable for outdoor use. Infra-red sensors can lock the platform when they sense of vehicle parked below. Digital keypad allows only authorised personal to operate the unit. Passive safety is incorporated into all aspects of the lifts' usage to insure as far as possible to minimize accidents.

Adjustable lift height switches enable The Donnington lift height to be set to ensure that that lift is not raised above that height; useful when you have low ceilings. Please see below for other options or please ask if you have individual requirements not mentioned here.

The Donnington, in line with all Strongman Lifts comes as standard with 240v single phase electric motors, so there is no need to put in an expensive three phase electrical supply.

Strongman provide a Turn-Key service which covers every aspect of both design & install, following on in years with both maintenance and repair contracts available. Strongman's experienced install team will install with a minimum of fuss and disruption to your business. The Turn-Key solution also permits your company to carry on business very much as usual

The Donningtons good design has a proven track record and will give many years of reliable service with a minimum of maintenance. Day to day operation is simplicity itself from the remote electrical wand with three simple buttons or if it is more convenient from the motor control box on the upright.

Benefits of Donnington

- Ultra-thin design on lifting platform ensures maximum room is available for the cars.
Galvanised platform for extended life.
- Stock items in two sizes the Standard & Classic, other sizes available at low to no cost.
- Solid deck platform ensures that no drips fall on vehicles parked underneath, even if they have come in to the store soaking wet.
- Electrical release ensures simple operation.
- Ultra wide uniform platform enable cars to be driven on to the lifts from an acute angle, making parking a doddle.
- Small footprint of the lift supports allow simple parking in the bay below, not encroaching on alternative usages.
- Strongman offer Turn-Key solution from initial site visit through to completion, with own in house installation team.
- No special site preparation required for installation.
- CE Certified with a host of built in safety features. Built in passive safety design.
- Dual hydraulic cylinders and twin synchronization chains keeping the deck level under all conditions.
- Automatic safety locks.
- Low maintenance units needing very little care and attention such as
- Maintenance-free composite carriage bearings.
- Maintenance-free self-lubricating chain rollers.
- Standard 240v mains required, no need for 3 Phase electrical supply.
- Standard integrated key-activated power on / off switch
- Extended 2 year guarantee
